RUB THRU ON PAINT

Your satisfaction is important to us, and we want you to be fully informed about the characteristics of rub thru on paint.

Movement is typical due to changes in the climate conditions on wood products. This may cause hairline cracks at the stiles, rails and joints that you will see in a painted finish. Shrinkage may also occur in the door panel of your cabinetry. Over time, there may be a slight color change in this finish due to exposure to natural and artificial light. You may notice some wood grain telegraph through the paint finish, especially in Oak.

Black and Charcoal Blue colors may amplify the natural flaws in the wood that may be hidden by lighter colors.

Rub thru finish is done by hand in our factory. There is no consistency to where rub thru is going to be on your cabinet doors and drawer fronts. Rub thru technique may vary from piece to piece in your cabinets. Rub thru will expose natural wood color and will be random in stiles, rails and in raised panels. This variation is not considered a defect and is not considered a warranty issue.

I have read the above information, and I acknowledge that Koch Cabinets does not consider the natural wood movement and characteristics of the painted finish I have chosen to be a warranty issue.
